

Rygaard's Axmen see the forest for the trees with Defog It™ Antifog

Case Study

The Work Environment: Hard work, heat, cold and moisture

Rygaard Logging is a fixture in the Pacific Northwest, now known worldwide from their connection to Axmen, the Discovery Channel TV show about the rigors of the logging business. No matter what the day brings – heat, cold, rain, fog, and always hard work – clear clear vision is a must for safety.

Results: The Clarity Defog It antifog clear-cuts fog.

When we asked Gabe Rygaard if he'd like some Defog It samples to test, we told him that the product is used by the military worldwide and that we'd just sent a case to soldiers serving in Iraq. His response: "Wow, Thank you, I have a brother that did 3 tours over there."

We shipped a case to their Washington office and waited for the results. The email from his wife, Katy, reports that "Gabe says [the Defog It cloths] work 'just fine.' He is happy that they do in fact work...He has actually used them on the windshield of his shovel to keep it from fogging up and it was successful."

The promise: It works.

The Clarity Defog It antifog formula is used by the military around the world to prevent fogged eyewear in vision-critical situations. It's been rigorously tested for performance. In one test, a lens treated with Defog It was held over constant hot steam for 60 minutes without fog forming. Similar products failed in as little as 5 minutes. In another test, lenses coated with Clarity Defog It were moved between cold and hot environments 100 times without fog forming.

Clarity Defog It antifog is safe and effective on safety glasses, safety goggles, faceshields and eyeglasses, even high-tech anti-reflective and super-hydrophobic lenses.
